## High-Speed PVC Fabric Doors of SPEEDROLL series with DOORHAN, GFA, BMP drives

## DoorHan

## 1. GENERAL INFORMATION

The information contained in this manual will familiarize you with construction, operation and maintenance of high-speed PVC fabric door (further - the product). The manufacturer does not directly control installation, operation and maintenance of the product. The operator shall be held responsible for safe operation and maintenance of the product. It shall be the responsibility
of the operator to comply with the instructions listed in this manual.
We recommend that installation, operation and maintenance be performed by a qualified technician.
The manufacturer reserves the right to modify the product without prior notice.

## 2. SAFETY RULES

## A ATTENTION!

Only trained personnel should operate or service this equipment!
Garefully follow the instructions provided in this manual when performing installation or operation of the doors.

- Always maintain proper lighting in the work area
- Keep the work area clean of people and objects during installation and operation of the doors.
- Install control unit at such a place that operator be able
to clearly see the door when operating it. The control unit shall always be kept closed.
- Turn OFF electrical power before making any electrical connections.

## 3. MODIFICATIONS

- SpeedRoll doors with DoorHan drive are compatible with control units of HSDC 181900, HSDC 18191, HSDC 18192, HSDC 18193, HSDC 18191(N) series. HSDC 18191(N) control unit is used with doors opened in emergency with counterbalance mechanizm.
- SpeedRoll doors with GFA drive are compatible with control units of TS 970 series (2 types).
- SpeedRoll doors with BMP drive are compatible with control units of HSD 1800, HSD 18001 series.

## 5. INSTALLATION

### 5.1. UNLOADING AND RECEIVING THE PRODUCT

Unload the product using a forklift or a crane. Make sure the components delivered correspond to the list provided in Components Set section of the manual.

### 5.2. GENERAL RULES

Make sure you observe all applicable safety regulations during installation of the product. We recommend that installation of the product be performed by DoorHan service department or DoorHan dealer.
Check whether door dimensions correspond to opening
width, height, and diagonal before proceeding to installation.

### 5.3. LOADING EQUIPMENT

- Forklift: minimum load capacity — 35 kN ; fork length - not less than $2,000 \mathrm{~mm}$.
- Crane, minimum lifting capacity — 20 kN .

### 5.4. TOOLS

- Tape measure
- Water level
- Set of screwdrivers
- Set of wrenches (17, 13, 10 and 8 mm )
- Hexagon set (17, 13, 10 and 8 mm )
- Hammer
- Rotary hammer
- Electric drill
- Stone and metal bits for rotary hammer
- Multimeter
- Scissors
- Wire cutters
- Pliers
- Stepladder

### 5.5. OPENING DIMENSIONS

W- opening width.
H - opening height.

Fig. 3. Side drive, counterbalance

Fig. 4. Front drive, counterbalance

### 5.6. DOOR FRAME INSTALLATION

It is important to prepare fasteners appropriate to the type of wall before starting with the installation. Make sure the lifting equipment is able to raise the door frame to the necessary height before starting to lift it.

[^0]
### 5.6.1. DOOR DIMENSIONS LESS THAN $3,500 \times 3,500$ MM

1. Place all door frame parts on a horizontal surface.
2. Dismantle tracks casing, shaft box and drive casing.
3. Fasten vertical tracks to shaft box with angles and screws.
4. Carefully raise assembled frame with a forklift and move it to the door opening.
5. Level all parts of the door frame with water level (put a pad under a track if necesssary).
6. Temporarily attach the frame (vertical tracks, shaft box) to the wall with fasteners.
7. Fix the shaft box and drive casing.

### 5.6.2. DOOR DIMENSIONS MORE THAN $\mathbf{3 , 5 0 0} \times \mathbf{3 , 5 0 0}$ MM

1. Place all door frame parts on a horizontal surface.
2. Dismantle tracks casing, shaft box and drive casing.
3. Level vertical tracks with water level (put a pad under a track if necesssary) and temporarily fix them to the wall with fasteners.
4. Carefully raise the door upper part with a forklift and place it on vertical tracks.
5. Fasten vertical tracks to shaft box with angles and screws.
6. Attach door upper part to the wall with fasteners.
7. Fix the shaft box and drive casing.

Left vertical track
Bend the plastic curtain guide to the right (in the upper part). Slide the curtain into the guide about 50 mm .

Right vertical track
Connect the cranck with motor shaft. Rotate the cranck and lower the curtain till it slides into the guide about 50 mm .

## DoorHan ${ }^{\circ}$

### 5.8. ADJUSTMENT OF CURTAIN TENSION

1. Moving the tracks along adjustment holes, adjust curtain tension so that the gap between the track and the guide is 5 mm .
2. Once adjustment of curtain tension is completed check whether the curtain is properly tensioned, fasten the vetical tracks firmly through all mounting holes, and install tracks casing.

Once curtain is inserted into the door guides adjust door limit positions (see Installation and Operation Manual for Control Unit).

### 5.9. MANUAL CLOSING/OPENING

Door drive has a special cranck used for emergency opening/closing of the door in case of power outage. Rotate the cranck clockwise to open the door, and counterclockwise to close it.

## 6. MAINTENANCE

1. Before door service and maintenance technician should:

- barricade the door and its working area from any form of traffic.
- turn OFF power supply

2. Maintenance and troubleshooting should only be performed by trained technicians.
3. Read these instructions thoroughly before service and maintenance of the door.
4. Never use open fire or heat source that may cause fire when performing maintenance.
5. Never use solvents of any kind.
6. No personel should be in the immediate vicinity of the serviced door unless maintenance technician needs help.
Service interval depends on operating conditions but it's necessary to carry out standard maintenance procedures every six months.

## Table 1. Service and maintenance highlights

| Service item | Procedure | Interval |
| :--- | :--- | :--- | :--- |
| General condition of <br> the door | Visually inspect: <br> - door curtain (clean door curtain with water and soap) <br> - vertical tracks <br> - if necessary, clean the structure with compressed air | every six months <br> (more often if <br> necessary) |

Table 1. Service and maintenance highlights (continued)

| Service item | Procedure | Interval |
| :---: | :---: | :---: |
| Electrical components | - inspect wiring conduit and cables in control unit <br> - inspect wiring conduit and cables inside junction box <br> - inspect safety sensors (photocells, sensing edge and emergency stop button) <br> - verify the opening/closing system functions properly (buttons and other optional devices, if present) <br> - verify that electric cables are in good working condition <br> - clean photocells at least once a month or more often if necesssary | every six months (more often if necessary) |
| Mechanical components | - inspect motor <br> - inspect motor brakes and perform their adjustment if necessary <br> - inspect reducer chain for wear and tension (front drive) <br> - inspect reducer for oil leakage; inspect mounting of the reducer to motor and to the unit for tightness <br> - inspect limit switch for: wear of toothed belt, wear and mounting tightness of pulley, correct functioning of arms and microswitches <br> - check all screws and bolts for tightness <br> - check the axial alignment of the counterweight belt coil (door with counterbalance) <br> - inspect bearings, lubricate if necessary <br> - check traks sealing for signs of wear <br> - check curtain guides alignment (can be cleaned with compressed air) | every six months (more often if necessary) |
| Door curtain | - inpsect door curtain for signs of wear <br> - check curtain for damage <br> - verify that door curtain rolls up properly <br> - adjust door curtain tension; check door mounting assembly for signs of wear and tear <br> - regularly clean the door curtain with soft wet cloth and mild detergent approved for acrylic fabric | every six months (more often if necessary) |

[^0]:    $\triangle$ ATTENTION!
    Maximum dimensions of the door assembled on a horiszontal surface and lifted with a forklift should not exceed $3,500(W) \times 3,500(H) ~ m m$.
    If door dimensions exceed the listed above figures install vertical tracks at first, than lift the door upper part, and fix it to the vertical tracks and wall.
